Eco-sense acidic rain detector

More Documentations

Eco-sense acidic rain detector

Our Research Question:

How can we reduce the effects of acidic rain on our ecosystem?

How can we detect acidic rain and manage its impact on agriculture using Arduino technology?

When rain is detected, the container opens, and the pH value of the rainwater is measured.

Interpretation: If the pH value is low (acidic), we can filt the water before using it for plants. If it's normal, we can use it directly for watering.

Our project helps farmers by alerting them to acidic rain and ensuring their crops receive safe water. And impacts agriculture.

King Faisal university – Future Expo Exhibition for invention

شهادة شكر وتقدير

تتقدم كلية العلوم بجامعة الملك فيصل بخالص الشكر والتقدير

للطالبة / ديمه عبدالله سالم العايد

لمشاركتكم ومساهمتكم في نجاح معرض الابتكارات والأبحاث العلمية FUTURE EXPO

المقام بكلية العلوم في يوم الثلاثاء الموافق 2024/11/19م

مع تمنياتنا لكم بدوام التوفيق والسداد

to me 🔻

Congratulations Tala Hussein Abuzayyad!

We are thrilled to announce that you are the 4-6 Grades Second Place Winner of the 2024 Array Global Stella Science Fair! Your outstanding entry stood out among hundreds of impressive submissions from around the world. The judges had a tough time selecting the best projects from each grade group, but your work truly shone. Attached is your special award certificate. We will also share the exciting news on our social media. Feel free to celebrate your achievement with your family, friends, and school community: https://www.facebook.com/arrayglobaledu/

We invite you to attend an awards ceremony via Zoom on Friday, May 24th at 7pm Saudi Arabia time. Array Global Executive Director Dr. Ray Lindley will provide a special congratulations to all of the award recipients. Please join us at: https://zoom.us/j/91626133842?pwd=TGIIVFF2TFc2WmhZSFVMRUIOQXRNZz09

Again, congratulations and we look forward to seeing your work in our future competitions!

Presented to
