

# Thin-Film Photovoltaic Panel Glued To A Roof Tile

**Dünnsfilm-Photovoltaik Paneel  
geklebt auf einen Dachziegel**

There is nothing more beautiful on the roof of a family house than clay tiles with a classic shape or modern large flat tiles of various colors. If you want a photovoltaic power plant on the roof, simply stick thin-film flexible photovoltaic panels 3 mm or less thick, directly to your old or new tiles.
